

CV Göran Olofsson

Birthdate: 1956-07-02

Title: Senior Project Manager / production

Summary

Broad engineering experience in project management, planning, customization and commissioning of production systems in the automotive and manufacturing industries. Product development with project responsibility. Active as a project manager and coordinator in coordinating positions. Accustomed to working independently but prefer teamwork and close customer/supplier relationships. Experience of 15 years as head of production or support functions for production. Over ten years international experience with a global perspective and understanding of international relations.

Professional Experience

Employer:

Duties:

Volvo Powertrain AB, Köping

Consultant

200709-201207

Project Leader within production

- Project Manager for a project in the automotive industry for investment in the new assembly line. The project team consisted of 10 people with different skills. Installation was to be in accordance with the Lean concept, of a station time of 90 seconds. The Lean tools that were applicable were used to design and evaluate various solutions, such as cycle-time reduction, spaghetti diagrams, Poka Yoke, FMEA My part of the project was completed with a fixed concept of supplier request
- Project Manager for a project that would improve the supply of spare parts to the internal spare parts organization. The goal of the project was to improve delivery accuracy from approximately 40% to 90% and agree with the customer on the parts that were "alive". Examples of issues discussed: classes of items in relation to delivery, order quantities, order-to-delivery system lifetime needs ... Upon completion of the project, the delivery precision average was 85% and a detailed parts list was developed.
- Project Manager for a project that would move a processing section of 50 processing machines. The equipment was moved into the old premises being renovated and adapted for the new business. Production Lean was designed to the greatest extent possible without investing in new equipment and the project was carried out during normal production. To cope with the project without production interruptions, it was necessary to plan the move in detail and with staff divided into teams that knew what they would do. The project lasted for 18 months including planning where production staff was very involved in the layout design. Time and budgets were met with minimal disruption to production.

CV Göran Olofsson

Volvo CE AB, Eskilstuna

Consultant

200609-200709

Project leader for the industrialization of the product

Project leader for the industrialization of the product. This responsibility was to coordinate and control all activities in the production plant, from the material on site to the product ready for delivery to the customer. Besides keeping up schedules, finances and quality assurance, all staff in production were informed and had the opportunity to influence the project.

LIMAB AB

Production Manager

199905-200608

Responsible for production, logistics, quality, purchasing and production with a personnel of about 10 persons.

Our overall goal was to improve delivery reliability. 50% of deliveries on time. 98% timely Ex. Actions included: replacement of 80% of the suppliers. Better balance accuracy in stock. Better maintenance and calibration of production equipment. Clearer instructions. Better trained staff.
